ABSTRACT

The aim of present work was to develop a simple and sensitive, HPTLC for the quantitative estimation of Telmisartan in its single component tablet formulations (40 mg). Telmisartan was chromatographed on silica Gel 60 F254 TLC plate using Toluene:Methanol (7:3 v/v/v) as mobile phase. Telmisartan in methanol scanned by Camag TLC scanner 4 with UV visible detector over wavelength range 200 to 400 nm, showed Rf value of 0.46 at wavelength of 299 nm and selected for further studies. The method was validated in terms of linearity (1-3 ng/ml), precision (intra-day variation 1.61, inter-day variation 2.73), accuracy (81.55 to 87.51%) and specificity. The limit of detection and limit of quantification for Telmisartan were found to be 0.25 ng/spot and 0.7 ng/spot, respectively. It can be concluded from the results that the proposed method was accurate, precise and consistent the determination of Telmisartan in Tablet dosage form. This method was validated as per ICH guideline Q2 (R1). Results suggest that this method can be used for routine estimation of Telmisartan in bulk and pharmaceutical dosage forms.

Key Words: Telmisartan, Toluene, Methanol, HPTLC.

INTRODUCTION

Telmisartan is an Angiotensin II receptor antagonist (ARB) used in the management of hypertension. Generally, Angiotensin II receptor blockers (ARBs) such as Telmisartan bind to the Angiotensin II type 1 (AT1) receptors with high affinity, causing inhibition of the action of Angiotensin II on vascular smooth muscle, ultimately leading to a reduction in arterial blood pressure. Telmisartan is official in Indian Pharmacopoeia. Literature survey reveals that some methods have been developed for their determination by HPLC, HPTLC or spectrophotometry. Either alone or in combination. However, overall cost of analysis of reported HPTLC method is more. In this view, an economical HPTLC method has been developed for estimation of Telmisartan in pharmaceutical dosage form.

MATERIALS AND METHODS

Telmisartan standard was provided by Aarati pharmaceuticals, Mumbai, India. “Tazloc 40 mg” Tablet were procured from local market. AR grade of solvents used for this study were purchased from Merck Pvt. Ltd, Mumbai.

Fig. 1: Chemical Structure of Telmisartan

Preparation of standard solution: A standard stock solution of Telmisartan was prepared by dissolving 10 mg of standard API in 10 ml of Methanol to get concentration of 1000 μg/ml. This solution was further diluted to get 100 μg/ml solution of Telmisartan as working standard.

Selection of wavelength for Detection

The working standard of Telmisartan in Methanol was scanned by Camag TLC scanner 4 with UV-Visible detector over wavelength range 200 to 400 nm. Wavelength 299 nm was selected for further studies. (Figure 2).

![Fig. 2: The overlain UV spectra of 1000 ng/ml Telmisartan (API and sample) between 200- 400 nm](image)

Chromatographic Conditions: This analysis was performed on Camag HPTLC system (Switzerland). It is equipped with a Linomat-5 applicator, 100 μl sample syringe (Hamilton, Switzerland) and Camag TLC scanner4. On the basis of trial and error method using different solvent system, following chromatographic conditions were chosen for analysis. Pre-coated silica gel 60 F254 TLC (E-Merck, Germany) plates (10x10 cm) were used as stationary phase. TLC plates were pre-washed with Methanol and activated at 110°C for 10 min prior to application. The standard samples of Telmisartan were spotted on pre-coated TLC plates in the form of bands of length 4 mm using 100 μl sample syringe with a Linomat-5 applicator. The chromatographic development was carried using Toluene:Methanol (7:3 v/v/v) as mobile phase with chamber saturation time of 20 minutes and the migration distance of 70 mm. Densitometric scanning was performed using Camag TLC scanner at 299 nm, operated by win CATS Software (Version 1.4.3, Camag).

Preparation of Calibration Curve: Different concentrations of the working standard solution were applied on the TLC plate, corresponding peak areas were recorded and linear regression was done between the absorbance vs concentration. Finally, 100-300 ng/spot range was selected for preparation of calibration curve and linear regression equation was obtained in this range (Figure 3).

METHOD VALIDATION
The objective of validation of an analytical procedure is to demonstrate whether the procedure is suitable for its intended purpose. The proposed method was validated for various parameters such as Linearity & Range, Precision, Limit of Detection (LOD) & Limit of Quantitation (LOQ) and Accuracy according to ICH Q2 (R1) guidelines.

**Linearity and Range:** The linearity was determined by using working standard solutions between 100-300 ng/spot. The spectra of these solutions were recorded at wavelength 299 nm. Calibration curve of peak area vs concentration was plotted after suitable calculation and simple linear regression was performed. Regression equation and correlation coefficient were obtained.

The range of solution has been decided according to statistical parameters of generated equation (Table 2).

**Precision**

**Repeatability:** The precision of the method was checked by repeatedly injecting (n= 6) standard solutions of Telmisartan (200 ng/spot). Absorption of these solution was measured at 299 nm. Relative standard deviation (%RSD) was calculated (Table 3).

**Reproducibility:** The intra-day and inter-day precision of the proposed method was determined by analyzing the corresponding responses 3 times on the same day and on 3 different days of same concentrations of 200 ng/spot of Telmisartan. The results have been reported in terms of percentage relative standard deviation (%RSD). The results were tabulated in (Table 4).

**Limit of Detection (LOD) and Limit of Quantitation (LOQ):** Nine sets of known concentrations (0.001-0.009 μg/spot) were prepared. Calibration curves were plotted for each set. LOD and LOQ were calculated using the regression equation (Table 5) and following formulae as

\[
\text{LOD} = 3.3 \, \text{SD/S} \\
\text{LOQ} = 10 \, \text{SD/S}
\]

Where,

SD is standard deviation of y-intercept of the calibration curve; S is mean slope of five calibration curve.

**Specificity:** The specificity of the method was ascertained by analyzing standard drug and sample. The spot for drug in sample was confirmed by comparing the R<sub>f</sub> and spectra of the spot with that of standard drug spot. The specificity of the method was also ascertained by peak purity profiling studies by analyzing the spectrum at peak start, middle and at peak end.

### RESULTS AND DISCUSSION

The Calibration curve was of Telmisartan was plotted as absorbance v/s Concentration. The generated regression equation was \( y = 0.001x + 0.001 \) \((R^2 = 0.996)\). The \( R^2 \) value as 0.996 indicates that developed method was linear. The calibration curve was obtained in the range of 1-3ng/spot. The proposed method was found to be precise as % R.S.D values for intraday as well interday precision were satisfactory. The drug at each of the 80%, 100% and 120% levels 87.51%, 84.17%, 81.55% showed good recoveries. Hence, it can be said that this method was accurate. The LOD and LOQ were calculated as 0.25 ng/spot and 2.75 ng/spot respectively. The result of the analysis of pharmaceutical formulation by the developed method was consistent with the label claim, highly reproducible and reliable. The method can be used for the routine analysis of the Telmisartan in formulation.

### CONCLUSION

It can be concluded from the results that the proposed method was accurate, precise and consistent the determination of Telmisartan in formulation. This method was validated as per ICH guideline Q2 (R1). Results suggest that this method can be used for routine estimation of Telmisartan in bulk and pharmaceutical dosage forms.

### ACKNOWLEDGEMENT

The authors are grateful to Aarti Pharmaceuticals, Mumbai, India for providing API of Telmisartan as gift sample. Authors also thanks to Anchrom Enterprises Pvt. Ltd. Mumbai, India and Sinhgad College of Pharmacy, Pune, Savitribai Phule Pune University, India for providing necessary facilities to complete this project work.
